

The **Installer** Features

The Installer magazine reports on all aspects of installation in the windows, doors, conservatories and wider home improvement market.

On a monthly basis it reports on new products, processes and services and also considers business critical issues such as Health & Safety, Accreditation, Marketing, Minimum Technical Competence, Recycling and Fleet & Vehicle Management.

In addition to special features, regular sections in the magazine report on different sectors such as the new build, housing association market or commercial property installation.

As the leading publication just for installers, we also step outside of the box and look at New Business Opportunities to assist the nation's most established home improvement sector in keeping its already extensive portfolio of additional products and services up-to-date.
