

Team-up for PAS Glazing chain

Timber fabricator Glyngary has partnered with VBH to develop a PAS24 certified door. Glyngary, a family-owned window and door fabricator since 1985, says it saw an opportunity to develop a door specification and security hardware package that helps them stand out from competitors. The partnership also includes Yale and Accoya.

The company wanted a long-lasting product using hardware which could match the performance of Accoya, a long-life sustainable wood, guaranteed against rot for 50 years. VBH's stainless steel greenteQ Coastline range is corrosion resistant, has a long-projected lifespan, a proven security record and a 25-year guarantee, so it was the obvious choice. It was used with the stainless-steel Yale Mantis 3 multipoint door lock which is also corrosion resistant. The range is made from Grade 304 stainless-steel, so it's exceptionally resistant to corrosion even in the harshest conditions. This is particularly relevant when using Accoya as, in common with most durable timber, there is a small amount of acid present in the wood

Gary Yates of Glyngary with Tyler Shutts, VBH area sales manager (North)

which will attack base metal fittings. Coastline's 25-year guarantee is the first of its kind and the range is also covered by the company's comprehensive Q-secure security performance guarantee, which makes it ideal for compliance with PAS24. □

Tradelink Window Solutions has created the definitive Residence range for installers by adding the seamlessly welded R9s to the collection. Just like the R7s window, R9s offers a fully welded frame. R9s is PAS 24 certified and comes with the option to glaze on site, or have fully bonded glass, depending on the installer's preferred choice.

Jim Moody, managing director at Tradelink says: "We wanted to create a Residence range that gave installers the opportunity to really impress homeowners looking for high-performance windows with heritage styling. R9s windows are fully welded to give impressive strength and the weld is almost invisible, to give a seamless finish.

"Residence adds real value for installers, so we wanted to give them the confidence to choose the window style and glazing method they want to sell and fit. With seamless R7s and R9s, glass bonded or glaze-on-site options as well as mechanical jointed frames and PAS 24 across the range, the Tradelink Residence Collection offers installers all the options to win more jobs." □

With the registration of installer Heathfield Windows, the first end-to-end glazing supply chain has become CORGI Fenestration registered – from system house Liniar to fabricators Whiteline to installers Heathfield Windows.

"Our vision was about creating a quality mark for the complete glazing sector supply chain, from top to bottom," says CORGI Fenestration CEO Chris Mayne.

"Individual fabricators and installers are registering and they will experience significant business benefits from doing so.

"But there are enhanced benefits, both for companies and consumers, of a fully registered supply chain such as the Liniar-Whiteline-Heathfield one.

"This will provide product traceability for homeowners, meaning the product installed is the same product tested and approved. It will also mean quality production and installation, a more qualified workforce and, ultimately, more reassurance for homeowners."

Steve Milham, MD of both Whiteline and Heathfield Windows, believes that the CORGI Fenestration mark will prove invaluable to both his fabricator business and his installer network because of the levels of consumer recognition for the brand.

Milham says: "I believe that the CORGI Fenestration brand is well known to homeowners. It provides a quick simple statement detailing the benefits of membership and the assurances it brings, rather than the complicated explanation currently used to justify the installation process." □
