

Sage Ulti-matt

Renolit's range of Exofol textured surface foils are intended to create a real painted wood illusion. As wood species themselves differ so does the range of textured wood embosses available says a Renolit spokesman. According to the company the surfaces include traditional and structured woodgrains, modern smooth matts, and linear designs and are offered in a number of colours.

Pebble grey

A spokesman says: "Pebble grey is a medium-light strength grey with undertones of green and wood-tick emboss. This colour, introduced just a few years ago, is steadily gaining momentum in the market. Grey continues to be the most popular colour of windows

Elegant Ash

currently preferred by homeowners, with trends indicating a shift towards lighter shades. Pebble grey provides a refreshing option. It looks stunning within pale cream rendered walls almost reflecting the natural colours of the surrounding garden lawns and countryside.

"We also offer Elegant Ash which has a lifelike surface finish. Its irregularly spaced woodgrain pores give movement to the overall effect. Completed with a matt surface finish it creates a realistic painted wood look. Four grey-neutral colours; Buckingham grey, Kensington grey, Windsor and Balmoral provide mainstream appeal for a diversity of building styles.

Claystone

"Moving away from grey, Claystone is an original pale sandy fawn colour with a greyish undertone. The full beauty of the finished product results from the exceptionally detailed TruGrain emboss which gives a low gloss soft touch surface finish.

"Finally our Ulti-Matt finish is an architectural flat matt surface. Ulti-Matt with its low gloss and fine structure provides a painted/powder coated look to profiles but with all the additional advantages associated with an exterior film. As the popularity of Ulti-Matt continues to increase we predict that this surface finish, which is available in a wide spectrum of popular commercial colours, will be one of the most sought after looks for fenestration in the coming years." □

Superior standards

Kolorseal has an established reputation when it comes to spray painting UPVC, aluminium, roofline and composite products. Spray painting is becoming increasingly popular writes Deborah Hendry, managing director at Kolorseal

Spray painting protects exterior surfaces from the elements, and it provides a long-lasting finish. It is a viable solution on renovation projects where wear and tear over time can really take its toll on some surfaces.

As people realise they can be more adventurous with colour on property, Kolorseal has to ensure that it can provide solutions for every single customer, on whatever sized project. The Kolorseal palette is vast and it is possible to colour products in any RAL, foil or BS colour as standard. Additionally with Farrow and Ball as well as the new corporate bespoke range, we can achieve virtually any colour required.

It is important when choosing coloured products that the paint provides a superior performance to standard paints. These need to be completely maintenance free and guarantees should be offered regarding weathering, resistance to chemicals and mechanical abrasion. The Kolorseal range has been specifically developed for the building industry, consequently the experience and advice we offer to customers is second to none.

When discussing a new project with a homeowner, it is essential to be able to rely upon the quality of the standards of the finished products. An installation or fabrication business will have to rely upon that for referrals.

A 'Kolorsealed' product has an intense, rich depth making the overall finish much more striking. Different colours can be used on both sides of any sized window or composite door.

With foiled PVC-U products being limited to certain colours, spray painting offers the ability to be matched to existing paint colours if a reproduction is required or bold and bright new colours on any renovation or new build project.

The team at Kolorseal is always available to advise on the best paint spraying method for any specific job, material or project. In expert hands it is possible to use their collective knowledge to advise on any new build or renovation.

As specialists Kolorseal's experts are familiar with a variety of products and surfaces that can be sprayed both internally and externally. The team fully understands and supports customers, knowing a stunning finish can be achieved and that it will last the test of time.

When carrying out on-site colouring it is important to ensure risk assessments have been carried out. It is essential to know that non-toxic paint is used to ensure that the environment is protected and that people will be safe once the job is finished. This is particularly important when working on commercial projects such as hospitals, schools or hotels. □
