

Yale has responded to the increasing trend for stable doors in contemporary settings as well as cottages and farmhouses with the launch of its new Lockmaster 21 stable door lock.

Bolting The Stable Door

Made specifically for PVC and composite stable doors, the Lockmaster 21 is a combination of Yale's recently launched multi-point door lock and its Lockmaster Keyturn key-operated multi-point lock for doors with a more aesthetically pleasing appearance.

The Lockmaster 21 stable door lock has been designed, developed and tested with Shepley, the trade window and composite door fabricator.

It achieves PAS 24:2016 security as standard when incorporated as part of a doorset – demonstrating that it has satisfied a range of criteria to prove it can resist common methods of attack from burglars.

Hook and anti-lift pin

The lock's security credentials are aided by the signature Lockmaster hook and anti-lift pin on both the top and bottom leaf, maintaining the hardware story across multiple door styles

offered by the majority of fabricators. It also features an easy-to-use push-in snib feature to prevent accidental lock-outs.

The range includes 35mm and 45mm backsets, is available with or without rollers and comes with a two-piece keep that makes installation easier.

Testing

It is tested to 240 hours of corrosion resistance (Grade 4) and features a faceplate made of 430 stainless with Yale branding.

Development

"We were pleased to work with Yale on the development of the Lockmaster 21 Stable Door Lock, providing our expertise to help ensure that testing and functionality are of the highest standard. The final product is an excellent addition to the market and will enhance both our own range of stable doors and other stable doors across the industry," says Tony Ball. Sales Director at Shepley.

Compliance

Paul Atkinson, Managing Director at Yale, adds: "The new Lockmaster 21 stable door lock is a long anticipated, welcome addition to our range, enabling us to offer a solution for composite, timber and PVC stable door sets, which are now a popular choice in modern settings as well as more traditional ones.

"The range provides all the security and compliance benefits that people expect from our Lockmaster line, while seamlessly fitting in with the aesthetics of stable doors. In this way, it provides the ultimate lock solution for fabricators and installers of stable doors."
